

Anish Khadka ERD 2.2

VisitProcedure is a weak entity because it represents the procedures performed during a specific visit. It cannot exist independently without being linked to both a Visit and a Procedure, as its identity is defined by the combination of these two.

The entity LabService is also a weak entity because it records the laboratory work or services associated with a procedure during a visit. It relies on both VisitProcedure and Laboratory for its existence, as a lab service must be tied to a specific

procedure and performed by a particular lab. Thus, it does not have a meaningful primary key on its own and depends on the keys of its owner entities.
